RIPPLE FIBER
Believe in Tomorrow.

Good news! Ripple Fiber will soon begin construction in your neighborhood.

Ripple Fiber has received all the necessary approvals to bring our high-speed fiber internet network to your area. This means we'll soon begin working in the easement (or right-of-way) near your home.

What is an easement, anyway?

The easement is the area between your property and the property owned by your town or city. This can include the grass between your sidewalk and the road, the space behind your property between your home and your neighbor, or a strip of grass right along the road. Easements can also be on side yards, especially in cases of rear easements with power lines running across the street. Our crews will soon begin installing our fiber internet in these areas.

To bring you our groundbreaking technology, we need to break a little ground.

We know the process can be inconvenient, and we will work to keep the disruption to a minimum. Utility owners, including the city, will clearly mark existing utilities with spray paint and flags, so we know which areas to avoid. Ripple Fiber is happy to provide you with additional flags (available on our website) so you can mark areas like invisible dog fences and sprinkler systems.

Once we've completed construction in your entire area, our land restoration team will return to repair any lawns or hardscapes to their original state - or better. We work to leave nothing behind but lightning-fast fiber internet.

Want to learn more about the process? Have questions about construction? Scan the QR code below, call 800-359-5767 or visit our website at ripplefiber.com/construction.

We are Ripple Fiber, and we can't wait to become your internet provider.

Believe in Tomorrow.

Sincerely,

Lance van der Spuy
President
